Real Gold Mining Ltd	246 HK	0.80%
Lingbao Gold Co Ltd	3330 HK	0.52%

The principal risks of investing in Market Vectors ETFs include sector, market, economic, political, foreign currency, world event, index tracking and nondiversification risks, as well as fluctuations in net asset value and the risks associated with investing in less developed capital markets. Gold- and silver-related investments are subject to risks including bullion price volatility, changes in world political developments, competitive pressures and risks associated with foreign investments. In times of stable economic growth, the value of gold, silver and other precious metals may be adversely affected. Mining companies are subject to elevated risks, which include, among others, competitive pressures, commodity and currency price fluctuations, and adverse governmental or environmental regulations. In particular, small- and mid-cap mining companies may be subject to additional risks including inability to commence production and generate material revenues, significant expenditures and inability to secure financing, which may cause such companies to operate at a loss, greater volatility, lower trading volume and less liquidity than larger companies. Investors should be willing to accept a high degree of volatility and the potential of significant loss.

Fund shares are not individually redeemable and will be issued and redeemed at their NAV only through certain authorized broker-dealers in large, specified blocks of shares called “creation units” and otherwise can be bought and sold only through exchange trading. Creation units are issued and redeemed principally in kind. Shares may trade at a premium or discount to their NAV in the secondary market.

The Market Vectors Junior Gold Miners Index (the “Index”) is the exclusive property of 4asset-management GmbH and is not sponsored, endorsed, sold or promoted by 4asset-management GmbH and 4asset-management GmbH makes no representation regarding the advisability of investing in the Fund.
